

## TURN YOUR LAPTOP INTO A CONTROL ROOM!

### TelVue GoToAir gives you multiple views from a single camera.

GoToAir takes the output of a single 4K Ultra HD camera and allows you to easily define multiple regions of interest and create a virtual Pan / Tilt / Zoom experience without a PTZ camera.

### Switch between “regions of interest”

Using an HD or Ultra HD IP camera and a PC, a single operator can switch between zones within the scene, create a “picture-in-picture” (PIP) display, add graphics and live narration, broadcast the mix and “GoToAir”!

### GoToAir turns a single-camera sports event or town council meeting into something that looks like a multi-camera shoot.

If you have several cameras, GoToAir can be a force multiplier, using each camera as a source of many viewpoints. Split up any scene into regions of interest that you define, and then use each zone as a separate incoming source. It's a great way to zoom in on the people and moments that stand out at any event.

### All this, with a single operator!

Emulate multiple cameras with the power of a single high-def camera. Add scoring graphics. At a fraction of the cost of the average full-blown sports production system.

**The best way to watch an event is from many viewpoints.  
SHOW THEM ALL, with TelVue GoToAir!**
